ProofOfWork ��� README

ProofOfWork

An animated, single-file personal portfolio — built from scratch in vanilla HTML, CSS & JavaScript. No frameworks. No build step. One `index.html`.

> You're looking at it. This repo *is* the portfolio.

Highlights

- **Animated splash** with a self-drawing logo and shine sweep
- **Swipeable section carousel** — Profile, Academics, Projects, Achievements, Certificates
- **Live GitHub activity** — a self-updating contribution graph and latest repos, pulled straight from the GitHub API
- **Rich project pages** — description, animated language graph, tech chips, screenshot galleries, and links to live app / GitHub / slides / README / report
- **"Ask about Manthan" chatbot** — a built-in assistant that answers questions about the work
- **Light / dark theme**, fully **responsive**, and **PWA-ready**
- **Zero dependencies** — just `index.html` + `assets/`

Built with

Vanilla JavaScript, HTML5, CSS3, SVG, GitHub REST API, Google Fonts (Space Grotesk, Inter, JetBrains Mono).

Run it

```
python -m http.server 8000
# open http://localhost:8000
```

It's fully static — drop the folder on Netlify, Vercel, or Render and it's live.

Structure

Path	What it holds
`index.html`	The entire app — markup, styles, and logic
`assets/`	Logos, screenshots, certificates, resume, project docs
